## SUMMARY

---

Final-year Computer Science student skilled in Java, Python, JavaScript, and modern frontend/backend development, with hands-on experience building AI-powered, scalable, and high-performance web applications.

## Education

---

|                                                                                                     |             |
|-----------------------------------------------------------------------------------------------------|-------------|
| <b>Guru Nanak Institute of Technology</b><br>B.Tech in Computer Science Engineering (CGPA: 7.88/10) | 2022 – 2026 |
| <b>Alphores Junior College</b><br>Intermediate – 88%                                                | 2020 – 2022 |
| <b>St Paul's High School</b><br>SSC – 97%                                                           | 2019 – 2020 |

## INTERNSHIP EXPERIENCE

---

|                                                                                                                                                                                      |                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>EY Global Delivery Services</b><br>MERN Stack Development Intern<br>Developed a full-stack e-commerce web application using the MERN stack (MongoDB, Express.js, React, Node.js). | Mar 2025 – Apr 2025 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|

## PROJECTS

---

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |      |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>Genrify – Content Recommendation Platform</b><br>– Developed a cross-industry content discovery platform using Next.js, TypeScript, and Supabase, enabling personalized recommendations across 5 film industries and 8+ genres.<br>– Integrated Google OAuth and built a taste profile engine tracking user interactions, improving recommendation relevance by 65%.<br>– Designed a unified dashboard delivering movies, books, and podcasts with OTT platform availability and 40% faster load times.          | 2026 |
| <b>Solar Still – ANN-Based Performance Prediction Platform</b><br>– Developed a Django-based web application using Artificial Neural Networks (ANN) with TensorFlow/Keras to predict solar still efficiency and freshwater output from environmental parameters, improving prediction accuracy by 25.<br>– Built data preprocessing pipelines and interactive analytics dashboards using Pandas, Scikit-learn, Bootstrap, and D3.js, enabling efficient dataset management and real-time performance visualization. | 2025 |
| <b>Resume Builder Web Application</b><br>– Developed a full-stack resume builder using React and Node.js, enabling dynamic template generation.<br>– Implemented real-time form validation, template rendering, and PDF export, improving user workflow efficiency by 35.                                                                                                                                                                                                                                           | 2025 |

## TECHNICAL SKILLS

---

**Languages:** Java, Python, JavaScript  
**Frontend:** React, TypeScript, HTML5, CSS3, Tailwind CSS, Framer Motion  
**Backend:** Node.js, Express, REST APIs, MySQL, Supabase  
**CS Fundamentals:** DSA, OOPS, Problem Solving, Software Engineering

**A System and Method for Performance Prediction of Solar Still Using Artificial Neural Networks**

Published in the Patent Office Journal No. 36/2025, dated 05 September 2025

Application No: 202541075902A

2025

Certifications

---

Generative AI: Prompt Engineering — **IBM**

Introduction to Information Technology and AWS Cloud — **AWS**

Corporate Analyst Development Program (CADP) — **JP Morgan**
